

Emergency Room Triage Flowchart

Emergency room triage is a critical process that prioritizes patients based on the severity of their medical condition. By efficiently categorizing patients, healthcare providers can ensure timely treatment for critical cases.

Step-by-Step Process:

- Patient Arrives

The patient enters the emergency department and registers at the reception desk.

- Initial Assessment

A triage nurse evaluates the patient's symptoms, vital signs, and medical history.

- Life-Threatening?

If the patient is in critical condition, immediate treatment is administered.

- Provide Immediate Treatment

Emergency interventions are initiated for life-threatening conditions.

- Assign Waiting Priority

If the condition is not critical, the patient is placed in a priority queue for further evaluation.

- Doctor Evaluation

A physician conducts a thorough medical assessment to determine the necessary treatment.

- Triage Process Completed

The patient is either admitted for further care or discharged with treatment instructions.
